

Yllo Cryptoplatform.

One system for creating crypto-assets globally.

Yllo is a cryptoplatform that creates an opportunity for everyone to become an issuer of their own coins. The cryptoplatform build on cluster architecture and consists of distributed nodes. It is the first step towards the decentralization.

What exactly is Yllo?

It is a single mechanism that combines everything necessary for generation and circulation of full cryptoassets in set environment formed by Yllo tools.

Yllo technologies focus areas:

Banking

Applying technology to reduce the international transactions costs of any value.

Private money

The ability to tokenize your own time, product, service and business.

Medicine and science

The exchange and storage of valuable information in distributed and encrypted form, excluding leaks.

Social tools

Encouraging individuals to be more active through cryptoassets in order to rise the level of culture, health, and social engagement.

Yllo elements.

01

Y.Core engine.

This is an online service in which the cryptoasset is created and administered. The release of a new cryptoasset takes less than 20 minutes.

Cryptoasset issuance involves several steps:

The issuer pays for the service of issuing coins in XLT.

2. In Y.Core interface the issuer creates a coin, sets its own logo and custom parameters. Also, the issuer can offer its deflationary model.

3. After the release of the cryptoasset, it immediately becomes available for use in any of Yllo tools.

02

XLT genesis-coin.

The coin on the basis of which the first generation of Yllo cryptoassets is issued.

LightToken

All cryptoassets issued by Yllo are called "LightTokens". They can be produced on the basis of XLT Genesis coin or other LightTokens.

LightToken can act as private money, loyalty points, stablecoins or company stocks.

Due to the XLT coin, Yllo attracts funding and develops its products. XLT Coin will always be a value, which somehow all Yllo network needed.

03

Yllo tools.

Applications and services that create a united infrastructure for the circulation and usage of cryptoassets.

• Yllo Messenger

It is an application for instant message and cryptoassets exchange, their usage and doing business.

• Yllo Notes

A tool for time management, setting tasks and working on documents.

• Yllo Wallet

A convenient tool for cryptoassets storage and sending with XLT, XRP and other coins support.

• LightWave PreSale platform

A trading platform for the classic cryptocurrencies exchange and all cryptoassets created in Yllo.

XLT parameters.

Ticker symbol XLT

Emission 100 billion

Cost \$0.003

Reliability

XLT network has no additional emissions, forks.

Burning

For any transaction, there is a minimum burning fee of 0.00001 XLT

Consensus YCP

Minimal unit 0.000001 XLT

Minimal unit name Photon

Environmental friendly

XLT is an eco-friendly coin: no mining, minimal energy consumption

Cryptography

The ECDSA public key algorithm is used to create a digital signature

XLT advantages.

The high rate of transactions

The transaction is processed within 5 seconds.

Simplicity

Due to Yllo tools, operating XLT is as easy as sending a message.

Tokenization

Any value as time, product, service or business can be tokenized through LightTokens.

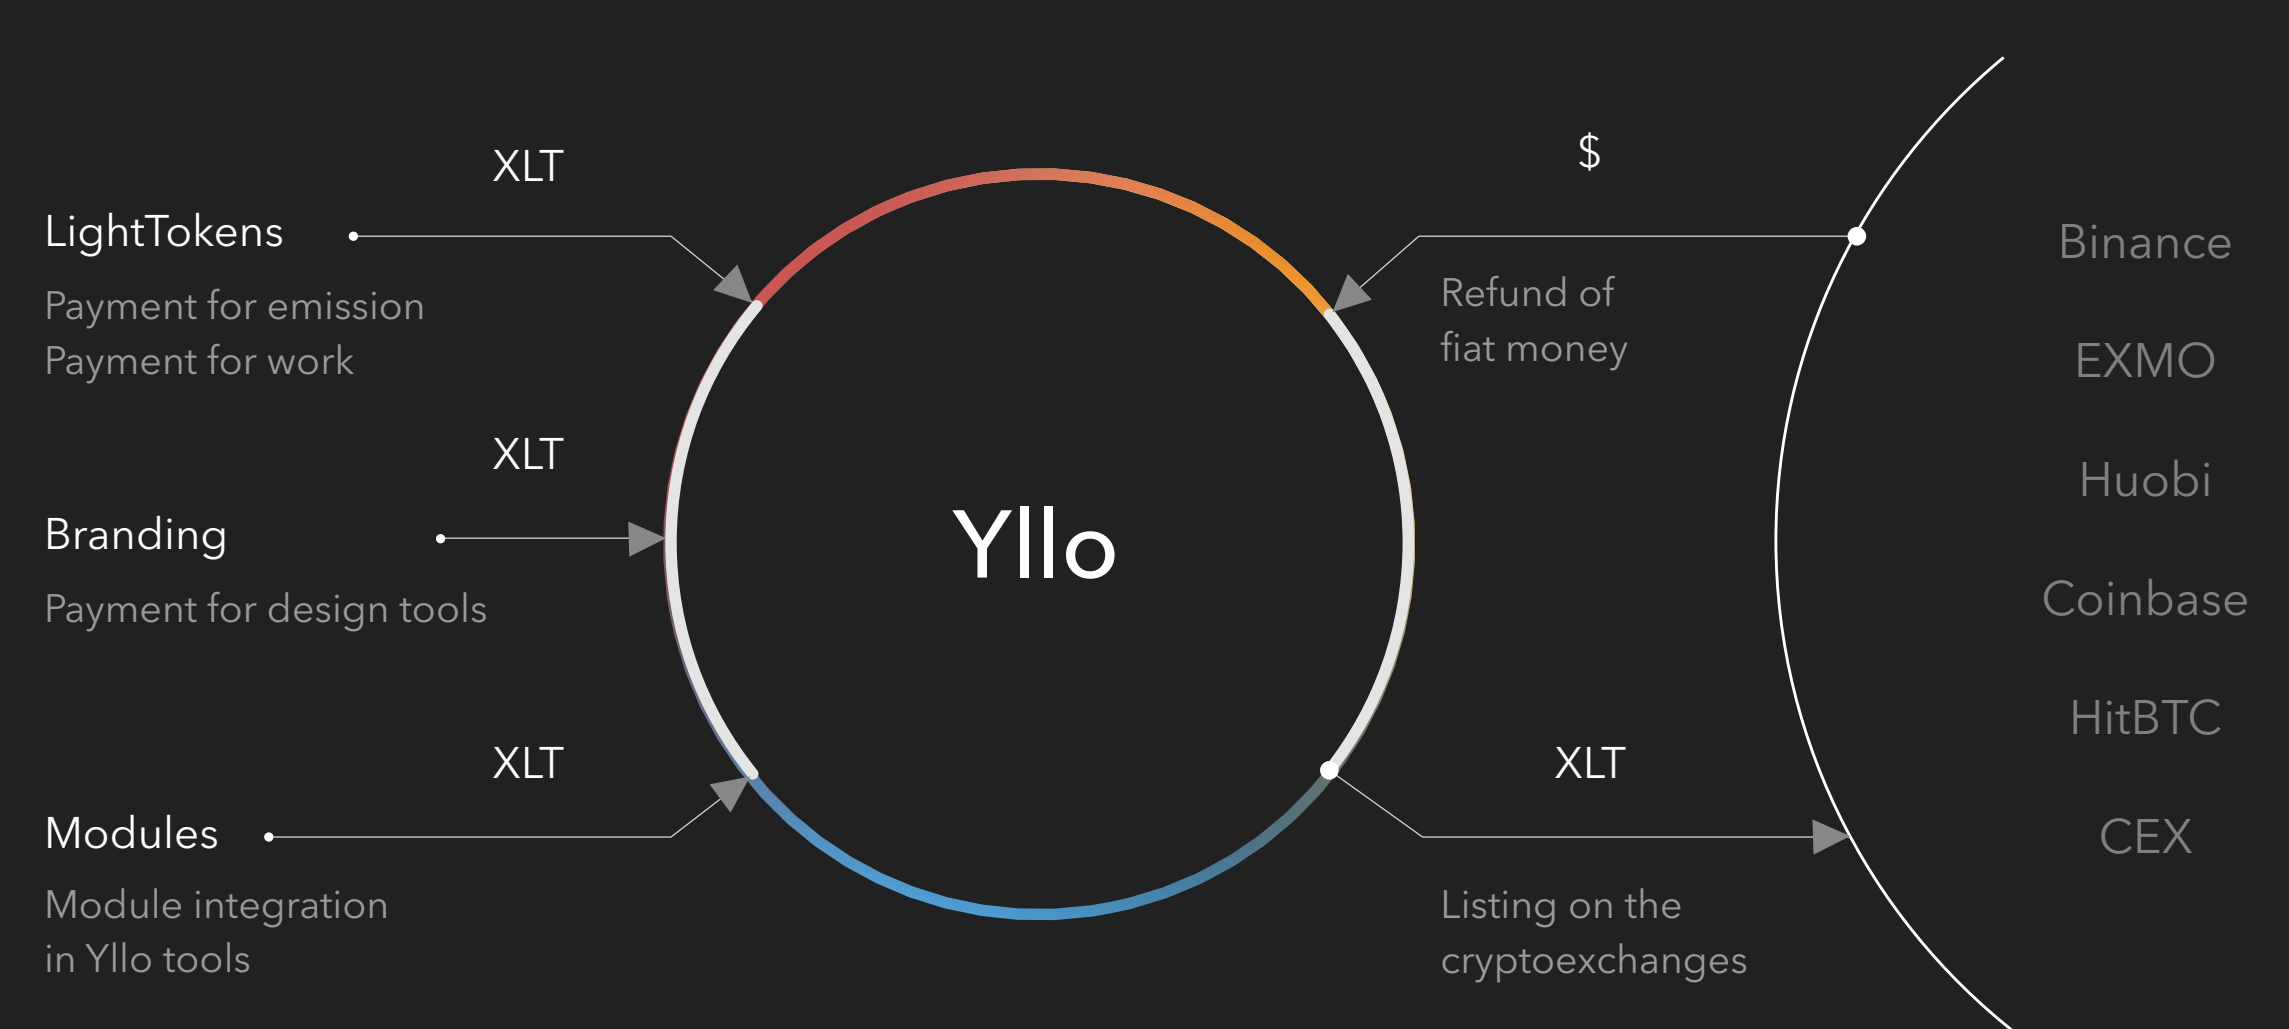

Flexibility

Any custom cryptoassets can be created through the XLT.

XLT distribution.

Yllo business model.

Core team.

Eugene Gevoy
CEO & Founder

The ideologist of the products, the inspirator of thought and purposeful leader.

Anna Gurkina
CCO & Founder

Tactician and strategist, business analyst and a caring director.

Yllo Services.

Creating cryptoassets

Everyone can create a cryptoasset to tokenize their working time, product, service or business.

Branding

On the basis of Yllo tools (messenger, wallet, notes, exchange), you can create your own branded tool with your logo, corporate colors and name.

Modularity

You can integrate your own module in Yllo tools. Online stores, food or taxi services, ticket purchases, hotel reservations can be presented as a module.

The module is a convenient solution for optimizing business processes related to the service provision. It is an option built into the application interface.

MVP.

• Yllo Messenger

Messenger prototype for communication, cryptoassets usage, and business.

Download for iOS

Android is coming soon

• Yllo Wallet

Cryptowallet prototype with XLT, XRP and other coins support.

Download for MacOS

Download for Windows
